

GRAZ MASTER LECTURE

FLORIAN BEIGEL UND PHILIP CHRISTOU

ARU
Florian Beigel and Philip Christou live and work in London, in the Architecture Research Unit (ARU), an architectural design laboratory based at the London Metropolitan University. ARU is primarily concerned with the exploration of ideas about space. These ideas are tested in live built projects – or design as research. Florian Beigel and Philip Christou will give this input lecture within the research project INTEGRAL at the LANDLAB ia&l.

Diese Graz Master Lecture findet im Rahmen des Projektes INTEGRAL statt. Das Projekt wird aus Mitteln des Klima- und Energiefonds gefördert und im Rahmen des Programms „Neue Energien 2020“ durchgeführt.

SAEMANGEUM PROJECT

The Saemangeum project is a large 400km² land reclamation project on the west coast of the Korean peninsula. A 33 km long sea wall, the longest in the world, was built to enable the land reclamation. The site is to be developed over the coming twelve years to house a population of 680.000. Saemangeum is situated in the center of South Korea's agricultural and food processing province Jeollabuk Do. Agriculture and agricultural research will form an important part of the spatial programme.
